interweaving architecture philosophy and cultural history materials and meaning in architecture develops a rich and multi dimensional exploration of materials and materiality in an age when architectural practice seems otherwise preoccupied with image and visual representation arguing that architecture is primarily experienced by the whole body rather than chiefly with the eyes this broad ranging study shows how the most engaging built works are as tactile as they are sensuous communicating directly with the bodily senses especially touch it explores the theme of material imagination and the power of establishing place identity in an architect s work to consider the enduring expressive possibilities of material use in architecture the book s chapters can be dipped into each individual chapter providing close readings of built works by selected modern masters scarpa zumthor williams and tsien insights into key texts and theories ruskin loos bachelard or short cultural histories of materials wood brick concrete steel and glass and yet taken together the chapters build to a powerful book length argument about how meaning accrues to materials through time and about the need to reinsert the bodily experience of materiality into architectural design it is thus also in part a manifesto arguing for architecture to act as a bulwark against the tide of an increasingly depersonalised built environment with insights for a wide range of readers ranging from students through to researchers and professional designers
